- Not FDIC Insured • No Bank Guarantee • May Lose Value

# Background - David Farris

- **Spent the first 12 years of career consulting for community banks and S&L's**
  - ☐ Focus on mortgage-backed securities (MBS) and managing interest rate risk
- **Spent next 10 years as portfolio manager for a non-agency mortgage REIT**
  - ☐ Traded and managed portfolio of agency and non-agency MBS and managed interest rate risk
- **Partner at Credentia Group, LLC, a private hedge fund**
  - ☐ Trading agency and non-agency MBS products
  - ☐ Managed investment strategies and risk
- **Joined Asset Management Group with Country Club Bank in 2019**
  - ☐ Provides asset liability management advice
    - ☐ Interest rate risk
    - ☐ Liquidity risk
    - ☐ Investment and funding programs
    - ☐ Overall balance sheet strategies
- **Capital Markets Group, a Division of Country Club Bank**
  - ☐ Registered Investment Sales Officer
  - ☐ Providing Investment Portfolio Management and Sales to Institutional and retail accounts

The *Asset Management Group* and *Capital Markets Group* of **Country Club Bank** are comprised of seasoned professionals recognized in the industry for their expertise, integrity and service. Specializing in helping institutional and community banks across the country with investment advice, portfolio and balance sheet strategies, and efficient trade execution.

# Municipal Bond Spreads Widened Dramatically

# Bank Yields, COF & Spread vs Market Rates

Source: S&P Global, Board of Governors of the Federal Reserve System (US)/Freddie Mac/FRED

# Decision Matrix as Rates Move Further from the Mean

	Yield Curve	Liability Strategy	Loan Strategy	Credit Strategy	Investment Strategy	Off Bal Sheet Strategy	Leverage Strategy
+2 Std	Inverted	Shortest Specials; Shortest Adv	More Fixed; Prepay Penalty Prime Index	Tighter Credit Standards Don't Reach	Max Duration Min Optionality	Asset: Var > Fix Liab: Fix > Var	Max Leverage (Max Invest)
+1 Std	Flattening	Shorter Specials; Shorter Adv	Prefer Fixed;	Begin Tighter Credit	Extend Dur Less Options	Hedge Int. Rate Exposure as Needed	Incr Leverage (More Invest)
-1 Std	Steepening	Longer Specials; Longer Adv	Prefer Floating;	Begin Easier Credit	Shorten Dur More Options	Hedge Int. Rate Exposure as Needed	Incr Leverage (More Loans)
-2 Std	Very Steep	Longest Specials; Longest Adv	More Variable; Tsy Index; No Caps	Easiest Credit Standards	Min Duration Max Optionality	Asset: Fix > Var Dep: Var > Fix	Max Leverage (Max Loans)

# Sell *Fast* Paying MBS

- FNMA 30 Year 4.00%
- Based on the 1, 3 and 6 month average speeds, the buyer of these bonds is willing to accept a **NEGATIVE YIELD**.
- You come out ahead even if you sell these now and stay in cash.

# Take Advantage of Hedges Built into the Risk Position

- Analyze the Bank's Overall Risk Position of their Balance Sheet
- A Risk Position Similar to our Example may Provide Opportunity to Invest Longer
- Longer Duration Investment will Even Out "Short" Position of Overall Risk Position
- Protects Income from a Further Drop in Rates
- Increases Income in the Base Case
- Extending from 0% in Funds to a 1.50% Yield on a Security adds \$300k in Income
- Interest Rate Risk on the Security is \$978k UP100 but Drops to \$730 after One Year
- How Potential Investments Fit Into the Banks Overall Risk Position Provides an Important Piece of Information for Banks Deciding Whether to:
  - 1) Invest Now When Rates are Low, Increase Income & Interest Rate Risk OR
  - 2) Stay in Cash and Forego Current Earnings

# Advantages of Issuing CALLABLE CDs

- Allows the Bank to aggressively issue longer term funding at historically low rates with the ability to call and reissue if rates go even lower or funding is no longer needed
- Callable CDs are callable by the BANK, not the investor – this is the ONLY Call Option you control!
- Callable any time after initial lockout period, typically 6 months but can structure to banks needs
- The bank creates cheap, long-term options for its balance sheet
- Improved interest rate risk profile in down rate scenarios versus non-callable term funding
- No provision for early withdrawal. Can't redeem prior to maturity unlike QwickRate or other sources
- No collateral posting required
- No FHLB Stock purchase required
- Provides additional liquidity by keeping borrowing lines available
- No additional ongoing fees such as subscription fees for listing service deposits
- Target specific maturities or call schedules. Lock in spread on a loan that may prepay in future
- Customize interest payments, monthly, quarterly, other. Flexible settlement dates typically 2-4 weeks
- Doesn't cannibalize retail funding markets
- **THE MOST FLEXIBLE ASSET/LIABILITY TOOL IN YOUR TOOLBOX**

# Advantages of Issuing CALLABLE CDs Now

- Improve Risk Position Now as Rates Go Up by Issuing Long-Term Callable CDs
- Issuing 5 Year Callable CDs will Improve Risk Profile in Up Rate Scenarios

## Market Value of Equity (MVE) Adjusted for Addition of Callable CDs

1	Rate Shift	Face	DN 200	DN 100	BASE	UP 100	UP 200
2	MVE Chg In Value \$		(4,089)	(3,557)	56,648	<u>6,335</u>	<u>11,323</u>

# 1m LIBOR vs Bank COF vs 5 Year TSY

Interest Rates Source: Board of Governors of the Federal Reserve System (US)/Freddie Mac/FRED

Bank COF Source: S&P Global

Bank Cost of Funds shown represents average of all banks <\$10B in assets.

# Interest Rate Swaps vs Callable Brokered CDs

- From 2009 until the end of 2015 1m LIBOR was ~20 bps, Comparable to Fed Funds
- Bank COF Trended Down During this Time Period and Began to Rise Slowly with Funds in 2016
- 1m LIBOR and Fed Funds Began their Trend Up in 2016
- Other Market Rates Began to Rise Earlier, in 2013
- Entering Into an Interest Rate Swap Would Not Have Been Advantageous Until 2016
- Issuing Long Term CDs Would Have Been Advantageous in 2012 – At All Time Lows In Rates (Like Today!) with the Opportunity to Invest in Higher Market Rates Beginning in 2013

## **This may also Hold True Today:**

- Issuing CDs will likely provide low cost funding for when better asset opportunities return
- It is Likely that Market Rates will Increase Before and in Anticipation of the Fed Raising the Funds Rate with the Fed Remaining Accommodative and Unlikely to Raise Prematurely
- Interest Rate Swaps will Provide Income Once the Fed Begins to Raise Rates Again BUT:

**HOW LONG WILL THAT BE AFTER INVESTMENT OPPORTUNITIES HAVE  
ALREADY PRESENTED THEMSELVES?**

# Bank Liquidity

## **Bank Liquidity Trends Lower as Rates Increase**

- Prepayments on Loans and Investments Slow
- Loan Demand Increases in a Stronger Economy with Higher Rates
- Deposits Turn Less Sticky when Market Rates Rise as Depositors Target Higher Returns

## **Bank Liquidity Trends Higher as Rates Decrease**

- Prepayments on Loans and Investments Increase
- Loan Demand Decreases in a Weaker Economy with Lower Rates
- Deposits are more Likely to Stay at the Bank and Wait for Higher Returns in Bonds or Opportunities to Invest in the Equity Markets

# Loan to Deposit Ratio versus Interest Rates

Interest Rates Source: Board of Governors of the Federal Reserve System (US)/Freddie Mac/FRED

Loan to Deposit Ratio Source: S&P Global

Loan to Deposit Ratio shown represents average of all banks <\$10B in assets.

# Bank Liquidity Tends to Trend Lower as Rates Increase

Interest Rates Source: Board of Governors of the Federal Reserve System (US)/Freddie Mac/FRED  
Liquidity Ratio Source: S&P Global  
Liquidity Ratio shown represents average of all banks <\$10B in assets.

# Many Banks Have Had a Surge in Deposits Since March

## Where did the Deposits Come From?

- Companies Have Deposited PPP Loan Proceeds into their Bank Accounts
- Companies Have Drawn on Short-Term Credit Facilities & Placed Those Funds in Bank Deposits
- Clients have Opened up Accounts at Other Banks to Segregate Funds...
- While Others have Moved More Deposits to Primary Banking Relationships
- Clients have held on to Cash that Might have Otherwise been Invested in the Business

## Which of the Deposits are Core and Which are Transitory?

- Some Deposits Will get Drawn Down Quickly to Cover Operating Expenses/Losses
- Others Will Stay Longer as Companies Hold More Reserve Cash in Uncertain Times
- Some Deposits Leave the Bank for Higher Returns When Rates Go Back Up
- Clients Will put Money Back into their Businesses

# Many Banks Have Had a Surge in Deposits Since March

## Steps to Determine Which Commercial Deposits Might Remain with the Bank

- For each client, how many other bank relationships do they have?
- Is my bank the primary bank for that client?
- If not, where does my bank rank among the other banks used by that client?
- Is the client likely to change which banks they use for the services they need?
- Would the client change the mix of banks they do business with?
- Is my bank's current position with the client stable?
- Am I able to improve my bank's current position with the client?

# Advantages of Issuing CALLABLE CDs Now

- Funds for Callable CD Issuance **WILL BE** at the Bank
- No Deposit Study Needed to Determine how Long they may Remain at the Bank
- Interest Rates are at Historic Lows
- If We are Cautious Extending Assets, We Should be Aggressive Extending Funding
- Liquidity will begin to Fall as Rates Increase and Loan/Deposit Ratios begin to Rise 9-12 Months from the Bottom in Rates
- When Rates Begin to Rise, the Opportunity to Raise Low-Cost Funding Goes Away
- You May Not Need Liquidity Now BUT WILL HAVE IT WHEN NEEDED AT ALL TIME  
INTEREST RATE LOWS

# Conclusions

- Interest Rates are at Historic Lows
- Sell Fast Paying MBS
- Also Consider other Low Yielding Investments as Sale Candidates
- Consider a Reinvestment Mix of Higher Yielding, Lower Risk MBS
- Take into account the Banks Overall Risk Position when Making Investment Decisions
- Consider the Pros and Cons of Interest Rate Swaps versus Callable CDs
- Raise Additional Liquidity Now by Issuing Long Term Callable Brokered CDs
- Liquidity is Currently High but will begin to Fall as Rates Increase and Loan/Deposit Ratios begin to Rise 9-12 Months from the Bottom in Rates. When this happens, the Opportunity to take Advantage of Today's Rates will have Passed.
- **TODAY'S RATE ENVIRONMENT IS AN OPPORTUNITY TO POSITIVELY AFFECT THE BALANCE SHEET FOR YEARS INTO THE FUTURE**
